

# SwingCheck 0.7

Released October 7, 2026 · v0.7.0 to v0.7.2

Easier marking on a phone.

---

## ● What's new

- **Drag a point to move it:** a point that landed a little off can be dragged to where it belongs, with the magnifier showing as you move it. No more Undo and trying again.
  - **Pinch to zoom:** on a phone, pinch the frame to zoom in for a closer look at the ball, club, and hands, and pinch out to zoom back.
- 

## ● Fixes and tweaks

- **v0.7.1:** Undo takes back your last action, so a point you moved goes back where it was.
- **v0.7.2:** The two grey lines beside the swing plane now sit the same distance from it on each side, so the on-plane zone reads evenly.
